## Supporting reforms in

# DENMARK

DG REFORM

February 2021

Since 2017, the European Commission has provided expertise to help design over 1000 reform projects in 27 Member States through the Structural Reform Support Programme. As of 2021, the Technical Support Instrument (TSI), its successor, continues to support reforms with an emphasis on the green and digital transitions. The TSI can also support the preparation and implementation of Member States' Recovery and Resilience Plans.

## NEW PROJECTS UNDER TSI 2021

In the first round of the TSI, the Commission will support Denmark with two projects:

Building capacity to translate climate targets into citizen-driven local investments

Developing digital tools for nursing allocation in hospitals

## PROJECTS

### ONGOING REFORM PROJECTS

Denmark has so far benefited from two projects financed under the predecessor of the TSI, the Structural Reform Support Programme (SRSP). This support is helping develop a new framework for assessing credit and fiscal risks as well as develop innovative interventions in the mental healthcare sector. Examples of successful reform projects include the following:

#### ➔ Mobilizing loans and guarantees for a swifter green transition

The European Commission is supporting Denmark to develop a new framework for assessing credit and fiscal risks when the government issues guarantees or loans for green investments. This instrument will help the Danish government to improve its decision-making process when issuing such guarantees and loans and will optimise the use of government resources destined to green investments and innovation, thereby accelerating the green transition. It is expected that the implementation of this framework will have an important added-value across the EU as other Member States can be encouraged to learn from the good practice.

#### ➔ Integrating mental health services for adult citizens

The European Commission is supporting Denmark in addressing the urgent need to improve care coordination for the mental health sector so that it can provide community-based interventions involving professionals from the region and municipalities, and from the health and the social care sector. The expertise provided under the programme is helping to develop a model that could provide tailored and flexible citizen-centred solutions in mental health in a harmonized but decentralized manner. The results of this project promise to help improve care coordination between different actors in a multi-level system.
